BEST AVAILABLE IMAGES

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images may include (but are not limited to):

- BLACK BORDERS
- TEXT CUT OFF AT TOP, BOTTOM OR SIDES
- FADED TEXT
- ILLEGIBLE TEXT
- SKEWED/SLANTED IMAGES
- COLORED PHOTOS
- BLACK OR VERY BLACK AND WHITE DARK PHOTOS
- GRAY SCALE DOCUMENTS

IMAGES ARE BEST AVAILABLE COPY.

As rescanning documents will not correct images, please do not report the images to the Image Problem Mailbox.

                                                    The present invention provides the protein and coding sequences of a number of human reproductive system related antigens. These can be used in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence encoding a protein of the invention.
                                                                                                                                                                 Sequence 32249 BP; 7986 A; 7715

                                                                                                                                                                                                                                                                                                                                                     The present sequence represents a human expressed sequence tág (EST). The polynucleotide, which is a secreted EST, and the encoded protein the producted to have useful biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, immune stimulating or suppressing activity, haematopoiesis regulating activity, tissue growth activity, haematopoiesis regulating activity, tissue growth activity, activin/inhibin activity, activity, tissue growth activity, activin/inhibin activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New polynucleotides encoding human secreted proteins - derived from e.g. human blood, kidney, foetal lung, placenta, testes, brain, ovary, pituitary, retina and colon cDNA libraries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      (GEMY ) GENETICS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Homo sapiens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid macular dispenses such as a sequence is a periopsy, neurofibromatosis, leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Olek A,

                                                                                                                                                                                                                                                                                          The present sequence is one of a large number of 5' ESTs derived from IRNAs encoding secreted proteins. No ORF has yet been conclusively total human RNAs or polyA+ RNAs derived from 30 different tissues. ESTs gequences usually correspond mainly to the 3' untranslated region (UTR) Conference such ESTs are not well suited from oligo-dry primed cDNA course from the 5' ends of mRNAs and even in those cases where longer CC in darances have been obtained, the full 5' UTR is rarely included. CC used to obtain full length cDNAs with intact 5' ends and can therefore be CC They are used to obtain upstream regulatory sequences and to design cc expression and secretion vectors.
                                                                                                                                                                                                            Query Match

The library is used to detect differentially expressed CC genes correlated with a cancerous state of a mammalian cell and can CC detect colon, prostate, breast and lung cancer. The library can be used CC to produce probes for detection of mRNA and to produce additional copies CC of the polynucleotides. The probes can be used for chromosome mapping of CC their gene products are used as generated. The polynucleotides and to detection of transcription levels. Ribözymes CC chair gene products are used as generated. The polynucleotides and CC carcinogenesis pathway and/or monitor the earliest changes along the CC carcinogenesis pathway and/or monitor the efficacy of therapies and CC carcinogenesis pathway and/or monitor the efficacy of therapies and CC carcinogenesis pathway and/or monitor the efficacy of therapies and CC carcinogenesis pathway and/or monitor the efficacy of therapies and CC carcinogenesis pathway and/or monitor the efficacy of therapies and CC carcinogenesis pathway and/or monitor the efficacy of therapies and CC carcinogenesis pathway and/or monitor the efficacy of therapies and CC carcinogenesis pathway and/or monitor the efficacy of therapies and CC carcinogenesis pathway and/or monitor the efficacy of therapies and CC carcinogenesis pathway and/or monitor the efficacy of therapies and CC carcinogenesis pathway and/or monitor the efficacy of therapies and CC carcinogenesis pathway and/or monitor the efficacy of therapies and CC carcinogenesis pathway and/or monitor the efficacy of therapies and compositions to compositions to displace the efficacy of the efficacy

                                                                                                                                                                                                                                                                                                                                                                                                                                                     Mouse Urogenital Sinus (UGS) tissue was isolated from 17 day old C untured and implanted under the renal capsule of mice. Reconstitutions were harvested 5 weeks later, when they showed isolated from a site outside the renal capsule. RNA was isolated from the tumour burden. Metastasised tumours were C from primary tumours and metastases, reverse transcribed and Subjected to differential display PCR. The sequences were analysed to obtain metastatic sequences, e.g. the present sequence The to metastasis, or treat malignant or non-malignant disorders related hyperplasia, dysplasia and hypertrophy. The metastatic sequence can be used to screen a biological sample for metastasis, and it or its expression product may also be used to treat a metastatic disorder.
                                                                                                                                                                                                                                                                                                                                                                            Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Probe #8358 for gene expression analysis in human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a single exon nucleic acid probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  23-JAN-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ABA29892 standard; DNA; 597
